Subject Code: 23CSH-304

1. Aim:

To write a Java program to calculate the square root of a number entered by the user. Use try-catch handle invalid inputs (e.g., negative numbers or non-numeric values).

2. Objective

- To understand how to handle invalid input using try-catch blocks in Java.
- To learn exception handling using NumberFormatException and custom exceptions.
- To validate numeric inputs and prevent program crashes.
- To gain practical knowledge of Java exception handling in user input scenarios.

3. Procedure

Step1: Prompt the user to input a number.

Step2: Convert input to a number type using Scanner.

Step3: Use a try-catch block to handle NumberFormatException and check for negative values.

Step4: If the number is negative, manually throw an exception.

Step5: If the number is valid, calculate and print the square root.

4. JAVA Script :

```
import java.util.Scanner;
```

```
public class Main {
```

```
    public static void main(String[] args) {
```

```
        Scanner sc = new Scanner(System.in);
```

```
        try {
```

```
            System.out.print("Enter a number:");
```

```
            double num = sc.nextDouble();
```

```
            if (num < 0) {
```

```
                throw new IllegalArgumentException("Cannot calculate the square root of a negative number");
```

```
            }
```

```
            double result = Math.sqrt(num);
```

```
            System.out.println("Square root: " + result);
```

```
        } catch (IllegalArgumentException e) {
```

```
        System.out.println("Error: " + e.getMessage());
    } catch (Exception e) {
        System.out.println("Error: Invalid input. Please enter a valid number.");
    }
}
}
```

5. Output:

Enter a number:-10000

Error: Cannot calculate the square root of a negative number

Process finished with exit code 0

6. Learning Outcomes:

- Successfully implemented exception handling in Java.
- Understood how to use try-catch blocks for error handling.
- Learned to validate user input to prevent invalid calculations.
- Practiced throwing and catching exceptions in Java.
- Improved problem-solving skills by handling runtime errors effectively.
